

INSTALLATION INSTRUCTIONS FOR ALL

FLAMECRETE DIY FLAME OCTAGON FIRE PIT KITS

- 1. When your material arrives make sure to inspect it for any damage while the shipper is there. Please take pictures of any damage. Once you are satisfied with your shipment, break it down in the area where it will be installed. We recommend that you watch the installation video on line. BECAUSE THIS IS A PRE-CUT KIT YOU SHOULD NOT HAVE TO CUT ANY PANELS OR TOP PIECES. IF YOU THINK SOMETHING IS WRONG CALL AND MAKE SURE BEFORE YOU CUT.**
- 2. We recommend that you mark out the exact place where your fire pit will be installed. SEE # 5**
- 3. Once this is done you are ready to start putting your fire pit together.**
- 4. Your fire pit will be shipped ready to install but you will need to take a stiff broom or brush and make sure that all surfaces that the adhesive will make contact with are dust free.**
- 5. The octagon fire pit comes with 8 pieces the same size. Apply 2 continuous beads of adhesive to only 1 edge (where the angles are cut) to the 8 different pieces. Put all 8 pieces together to make your fire pit. Then using the ratchet straps that we furnish lightly tighten the straps so just a little of the adhesive bleeds out of the joints. Make sure you even up the top part of the fire pit. You need to evenly space the straps around the fire pit. If you want to permanently attach your fire pit then you need to sit the “put together” fire pit where you want it. Then mark around the outside of the fire pit. Remove the fire pit, apply the adhesive **INSIDE THE LINES** and put the fire pit back in place.**

- 6. You are now ready to install the top piece. Before you install the top piece make sure you have all of your natural gas or propane fittings, valves and whatever else you may need installed. You may now go ahead with installation of the top.**
- 7. Apply 2 beads of adhesive on top of each panel. Then put the top on and even it up with the sides of the fire pit. Then take the remaining screws, 8 and attach the top to the base. Don't over tighten the screws.**

If you are purchasing all of the gas or propane fixtures to complete your fire pit from us, then you will receive additional instructions. If you purchase these items from someone else make sure that you follow their instructions. YOU NEED TO CHECK WITH YOUR LOCAL BUILDING DEPARTMENT REGARDING CODES FOR THE INSTALLATION OF ANY GAS PRODUCTS. WE RECOMMEND THAT YOU CONTACT AND USE A LICENSED OR A CERTIFIED PROFESSIONAL IN THE INSTALLATION OF GAS PRODUCTS.

Thank you for purchasing your new fire pit from FlameCrete.com. If you have any questions regarding the above process we suggest that you review the video regarding the installation process or call us.
