

INSTALLATION INSTRUCTIONS FOR ALL FLAMECRETE DIY OCTAGON FIRE TABLE KITS

- 1. When your material arrives make sure to inspect it for any damage while the shipper is there. Please take pictures of any damage. Once you are satisfied with your shipment, break it down in the area where it will be installed. We recommend that you watch the installation video on line. BECAUSE THIS IS A PRE-CUT KIT, YOU SHOULD NOT HAVE TO DO ANY CUTTING OF ANY MATERIAL THAT IS PART OF THE KIT.**
- 2. We recommend that you mark out the exact place where your fire table will be installed. SEE # 5**
- 3. Once this is done you are ready to start putting your fire table together.**
- 4. Your fire table will be shipped ready to install but you will need to take a stiff broom or brush and make sure that all surfaces that the adhesive will make contact with are dust free.**
- 5. The octagon fire table comes with 8 pieces the same size. Apply 2 continuous beads of adhesive to only 1 edge (where the angles are cut) to the 8 different pieces. Put all 8 pieces together to make your fire table. Then using the ratchet straps that we furnish, lightly tighten the straps so just a little of the adhesive bleeds out of the joints. Make sure you even up the top part of the fire table. You are to evenly space the straps around the fire table. If you want to permanently attach your fire table then you will need to sit the “put together” fire table where you want it. Then mark around the outside of the fire table. Remove the fire table, apply the adhesive INSIDE THE LINES and put the fire table back in place.**

- 6. You are now ready to install the top. Before you install the top piece make sure you have all of your natural gas or propane fittings, valves and whatever else you may need installed. You may now go ahead with the installation of the top piece. Since your fire table will have a 12” over hang on all 8 sides, it is necessary to make sure you know where to place the table top before you apply the adhesive.**
- 7. Apply 2 continuous beads of adhesive on the top of each panel. Then put the top on and even up all 8 sides. Then take the remaining screws and using a equal number in each panel, attach the top to the fire table. Don’t over tighten the screws.**

If you are purchasing all of the gas or propane fixtures to complete your fire table from us, you will receive additional instructions. If you purchase these items from someone else make sure you follow their instructions. YOU NEED TO CHECK WITH YOUR LOCAL BUILDING DEPARTMENT REGARDING CODES FOR THE INSTALLATION OF ANY GAS PRODUCTS. WE HIGHLY RECOMMEND THAT YOU CONTACT AND USE A LICENSED OR CERTIFIED PROFESSIONAL IN THE INSTALLATION OF ALL GAS PRODUCTS.

Thank you for purchasing your new fire table from FlameCrete.com. If you have any questions regarding the above process we suggest that you review the video regarding the installation process.
